PERSONAL PROJECTS

Full-Stack Web Application ***(ft_transcendence)***
Architected and developed user profile management system with full CRUD functionality. Designed and implemented RESTful APIs using Node.js and Express, integrated with PostgreSQL. Implemented security features including authentication, input validation, and vulnerability protection.

Unix Shell Implementation ***(Minishell)***
Built a Unix shell replica in C with command execution, built-ins (cd, echo, export, env, exit), and signal handling. Implemented I/O redirection and heredoc operators. Managed process creation and inter-process communication for pipeline execution.

Dining Philosophers Problem ***(Philosophers)***
Implemented the classic dining philosophers problem using multithreading and mutex locks. Designed deadlock prevention mechanisms and synchronized resource sharing between threads.

Containerized Infrastructure ***(Inception)***
Designed and deployed multi-service architecture using Docker and Docker Compose. Configured NGINX reverse proxy, database services, and application containers with optimized networking.

Real Time Chat Server ***(ft_irc) · C++, TCP/IP, Socket***
Built scalable server handling concurrent connections with multi-client channel management over TCP sockets.
